DIGITAL CLOCK MAINTENANCE

4-1. COMPONENT PARTS OF CLOCK ASSEMBLY

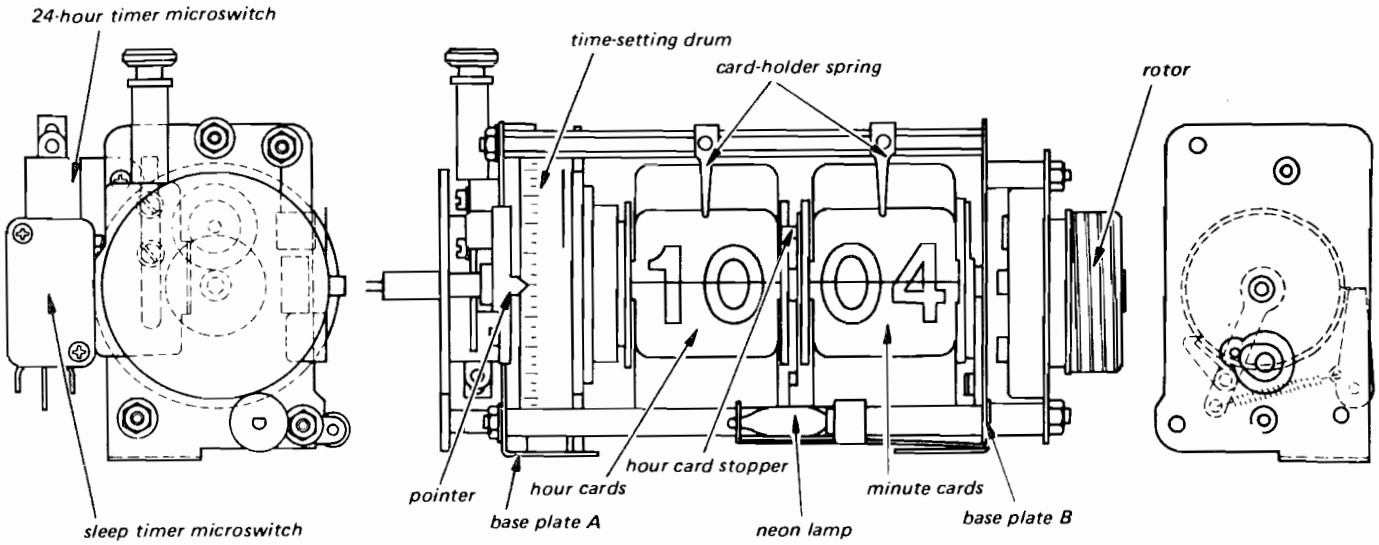

Fig. 4-1. Layout of digital clock

4-2. PRECAUTIONS FOR DISASSEMBLY AND REASSEMBLY

Following are the precautional items to be closely adhered to in disassembling and reassembling the clock.

(1) Wear clean gloves so as not to leave fingerprints and/or grease on the clock parts.

(2) Be sure to hold the clock assembly by gripping the base plates (A) and (B) when removing or reinstalling the clock assembly.

(3) Do not touch the rotor of the motor when handling the clock assembly.

(4) Do not touch the hour and minute cards, hour card stopper, card-holder spring and pointer.

(5) Be careful not to give any blow to the rotor and pointer when removing or reinstalling the clock assembly.

(6) When installing the clock assembly to the cabinet, tighten its attaching screws uniformly.

4-3. MOTOR ASSEMBLY REPLACEMENT

(1) Remove two hex nuts (together with plain washers), securing the motor to the bosses. Now, the motor can be removed from the clock assembly.

(2) Install a new motor in place with its rotor side facing outside, and secure it by tightening the hex nuts good and hard.

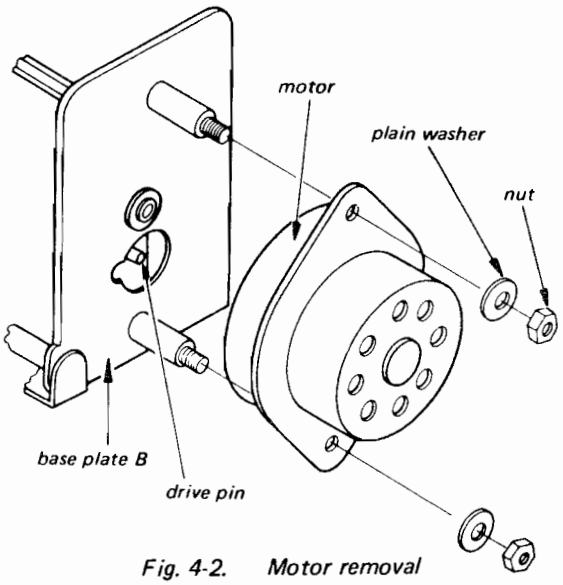

Fig. 4-2. Motor removal

Notes: 1) When installing the motor, keep its lead wires lifted upward.

2) Check to make sure that the cam of the motor is properly positioned with respect to the driven pin of the minute count lever.

3) Apply an adequate amount of screw locking agent to the hex nuts to prevent the possibility of loosening them.

4-4. NEON LAMP REPLACEMENT

(1) The lamp can be removed from the clock assembly by straightening its clamp.

(2) Install a new neon lamp in place by inserting its tip into the hole provided in the support plate. Then, bend up the clamp against the lamp for securing.

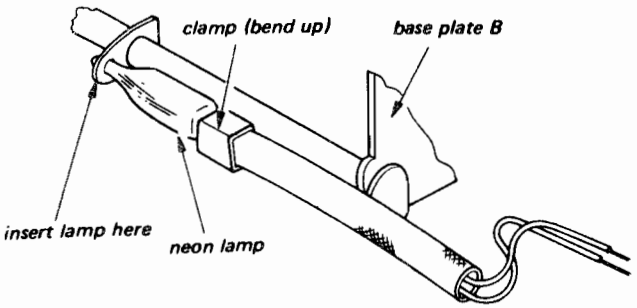

Fig. 4-3. Neon lamp installation

4-5. MICROSWITCH REPLACEMENT

(1) 24-hour Timer Microswitch

This microswitch, like the 24-hour timer switch, ment by removing two attaching screws, upper and lower, as shown in Fig.4-4. The upper attaching screw is used to secure the microswitch lever shaft also. It is, therefore, necessary to see, upon installing a new switch, if the microswitch lever is properly installed in place.

Check the microswitch operation in the following manner:

a) Finger-rotate the time-setting drum counter-clockwise (as viewed from the knob gear side of the clock), making sure that the switch button (red) is depressed by the spring-loaded micro-switch lever when the clutch cam is engaged (moved toward the drum).

b) With the clutch cam kept in engaged position, finger-lift the microswitch lever and release it to see if the lever is spring-returned to depress the switch button properly.

c) Make sure that the microswitch is turned off when the clutch cam is disengaged (moved away from the drum). Repeat the operation as in Steps a) through c) above at four equal intervals of time setting to make sure that the switch properly operated.

(2) Sleep Timer Microswitch

This microswitch, like the 24-hour timer switch, can easily be removed by removing two attaching screws then it has to be replaced. Upon installing, check the switch for proper operation. The switch must be turned on when the rack is pulled upward, and vice versa. The left-hand edge of the rack is profiled to control the switch button. The rack disengages from the 3rd gear to drop by itself, releasing the switch button (red) when the button is on the half-way of the beveled edge of the rack on its downward stroke. Remember that if the switch is positioned too close to the rack when installed, the force for pulling up the rack will be increased.

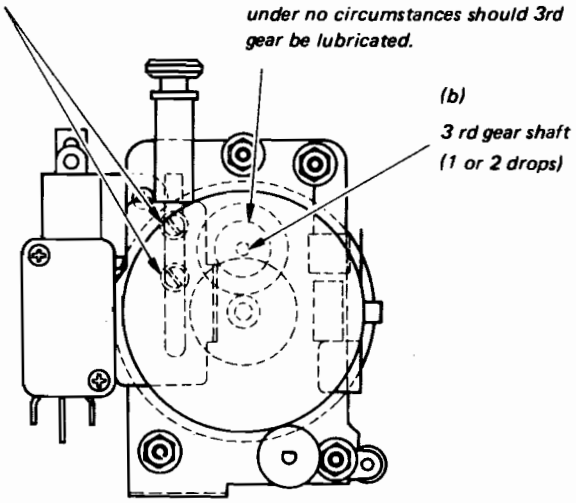

Fig. 4-6 (B).

Note: When assembling, lubricate the following parts as specified in Fig. 4-6. The lubrication oil to be used is " Launa 40", Only oils equivalent to "Launa 40" must be selected for use. Do not apply too much oil.

a) Main shaft bearing

b) 3rd gear shaft (1 or 2 drops)

c) Idler gear shaft

d) Rack sliding surface and rack guide screws (1 or 2 drops)

e) Main shaft bearing at minute-counting lever

f) Minute-counting click shaft (1 or 2 drops)

g) Minute-setting lever shaft (1 or 2 drops)

h) Minute-counting lever shaft and cam contact surface
